

Steiner Power Distribution

© 2015 Analogue Realities Rev 1.1

"As Req" capacitors and resistors to be used when required in schematic. Otherwise, do not install.

Use capacitor/resistor values as specified in associated schematic

LEDs are to maintain a minimum load for proper regulation. They may be omitted if not needed.

Only install regulators if needed to convert +/-15V to +12/-10V, or -12V to -10V. Jumper indicated leads if regulator is not used.
