

NOTES:

POWER CONDITIONING:
This module runs on +/- 12 volts. It can use +/-15 if you add the regulators.

MISC:

- * Install either the trimmer or the panel control. Not both
- If the sustain trimmer is installed as a panel pot, you don't really need the Sustain control. Put a jumper between pins 1 and 3 of SW6 to enable the sustain control.
- If the VCF Q trimmer is installed as a panel pot, you don't really need the Resonance switch. Put a jumper between pins 1 and 3 of SW3 to enable the control.
